How to Right Click using Keyboard in Windows

Information

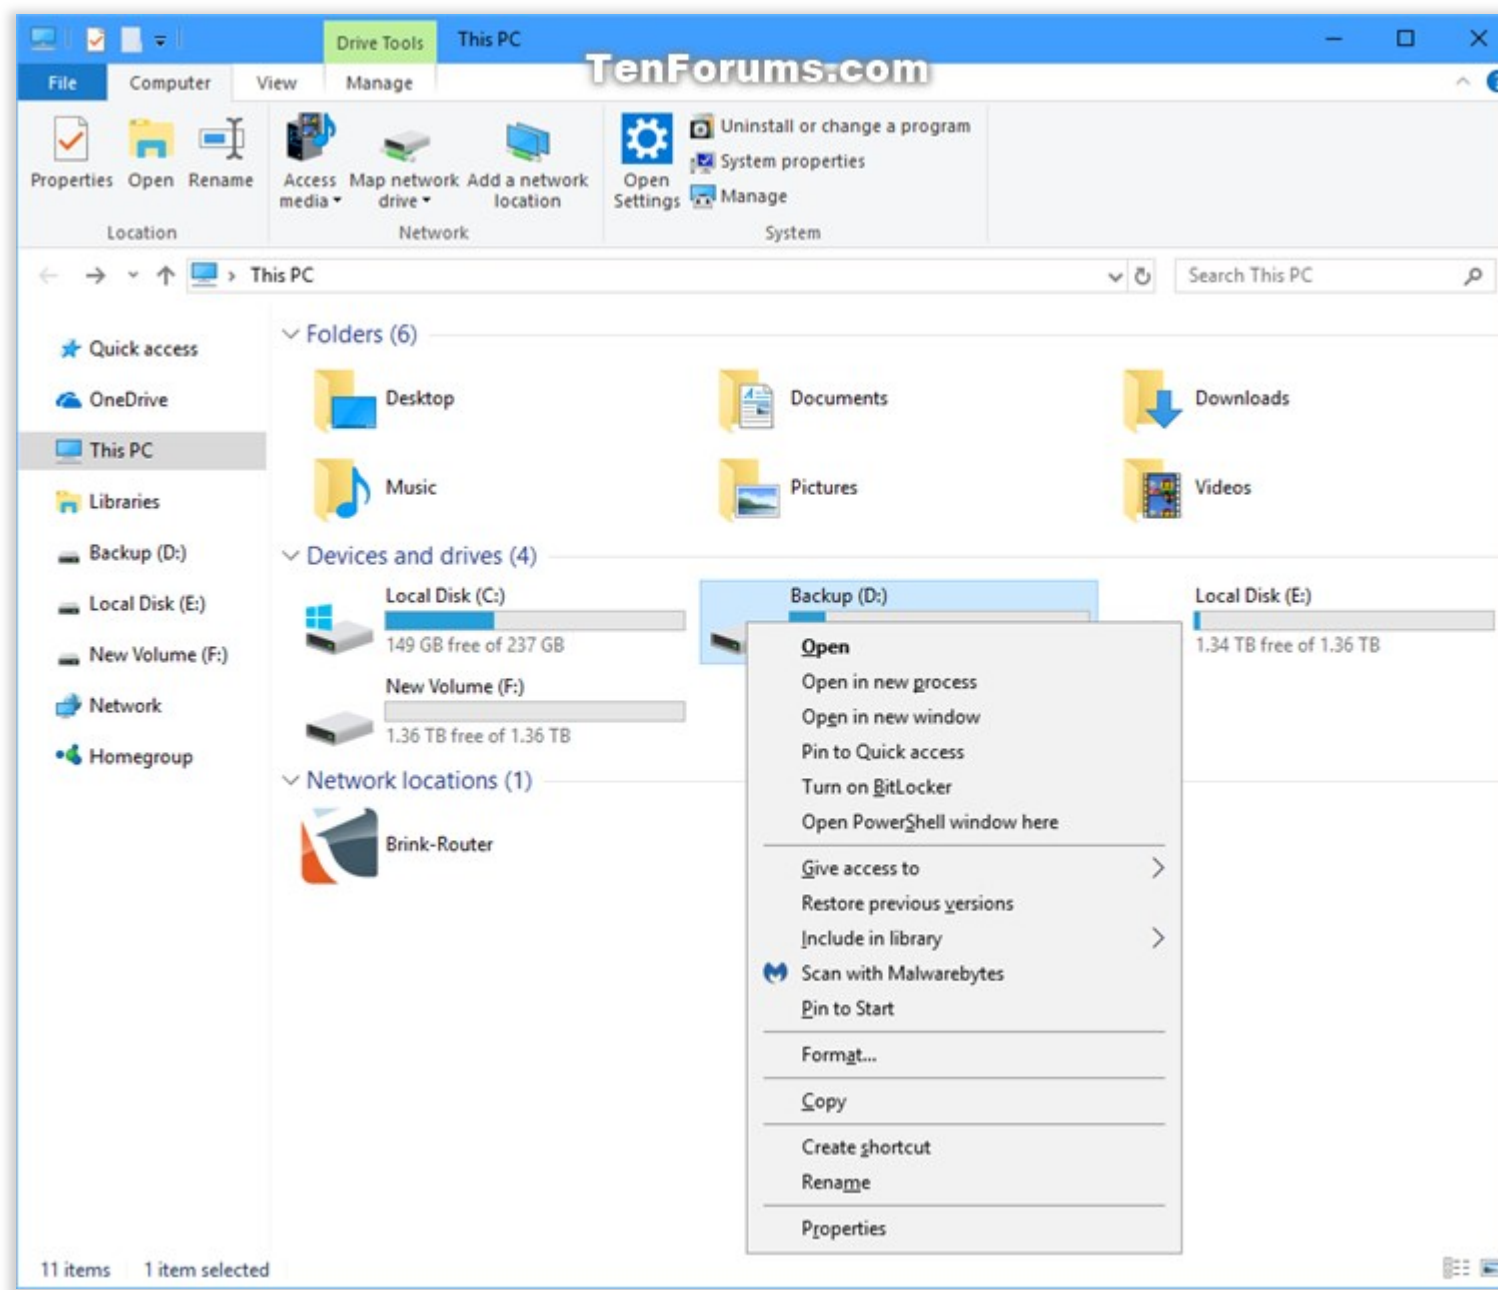

The **right click** is the action of pressing the right button on a mouse or touchpad. When you right click on an item in Windows, it will usually open a context menu, drop menu, or jump list for additional options for that item.

This tutorial will show you how to right click on files, folders, and drives in File Explorer or on your desktop using a keyboard in **Windows 7, Windows 8, and Windows 10**.

Here's How:

1. Select one or more items you want to right click on.
2. Press the **Shift + F10** keys.

- A) Look for the **underlined letter** in the context menu of the item you want to select, and press that letter on the keyboard.
- B) Press the **arrow keys** to navigate to and highlight the item you want in the context menu, and press **Enter** to select it.
- C) **Click/tap** on the item you want in the context menu.
